

# Hepatitis C for HIV doctors

Dr Chloe Orkin

Consultant Physician and Honorary Reader in HIV Medicine 

Barts Health NHS Trust

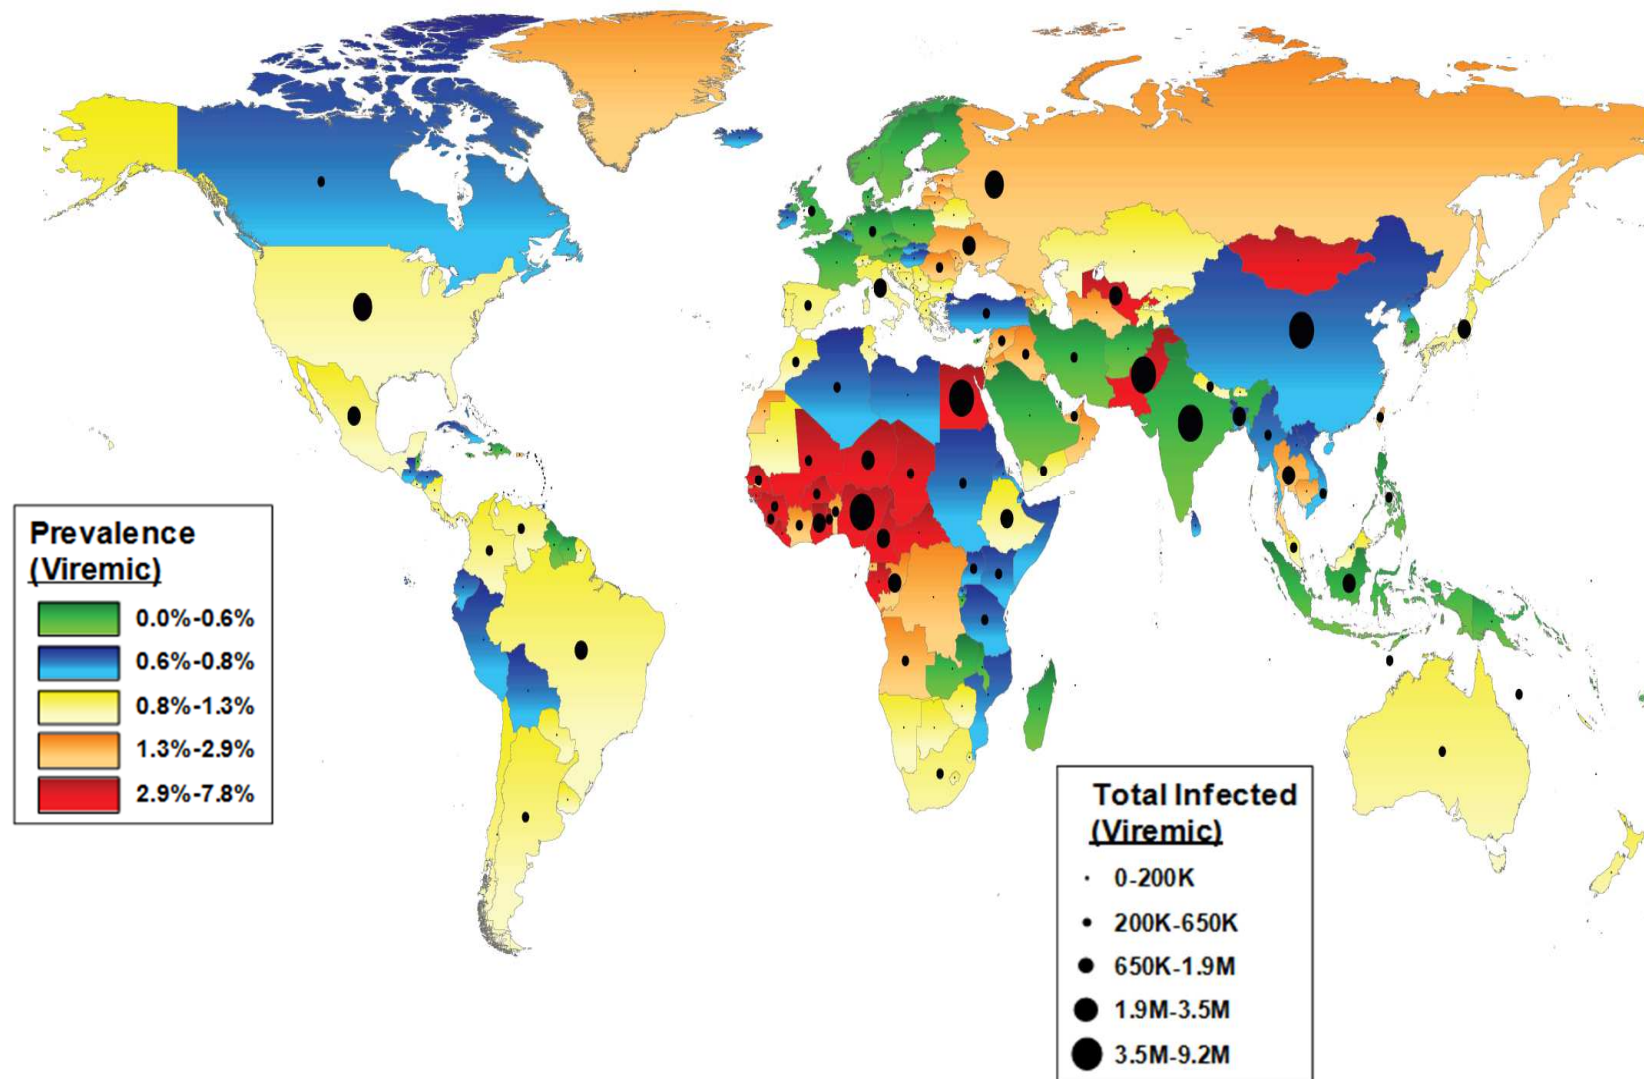

# Disclosures

- Disclosures: I have received honoraria, educational grants, travel scholarships and research grants from Gilead, MSD, BMS, Viiv, Janssen, J&J , BI and GSK

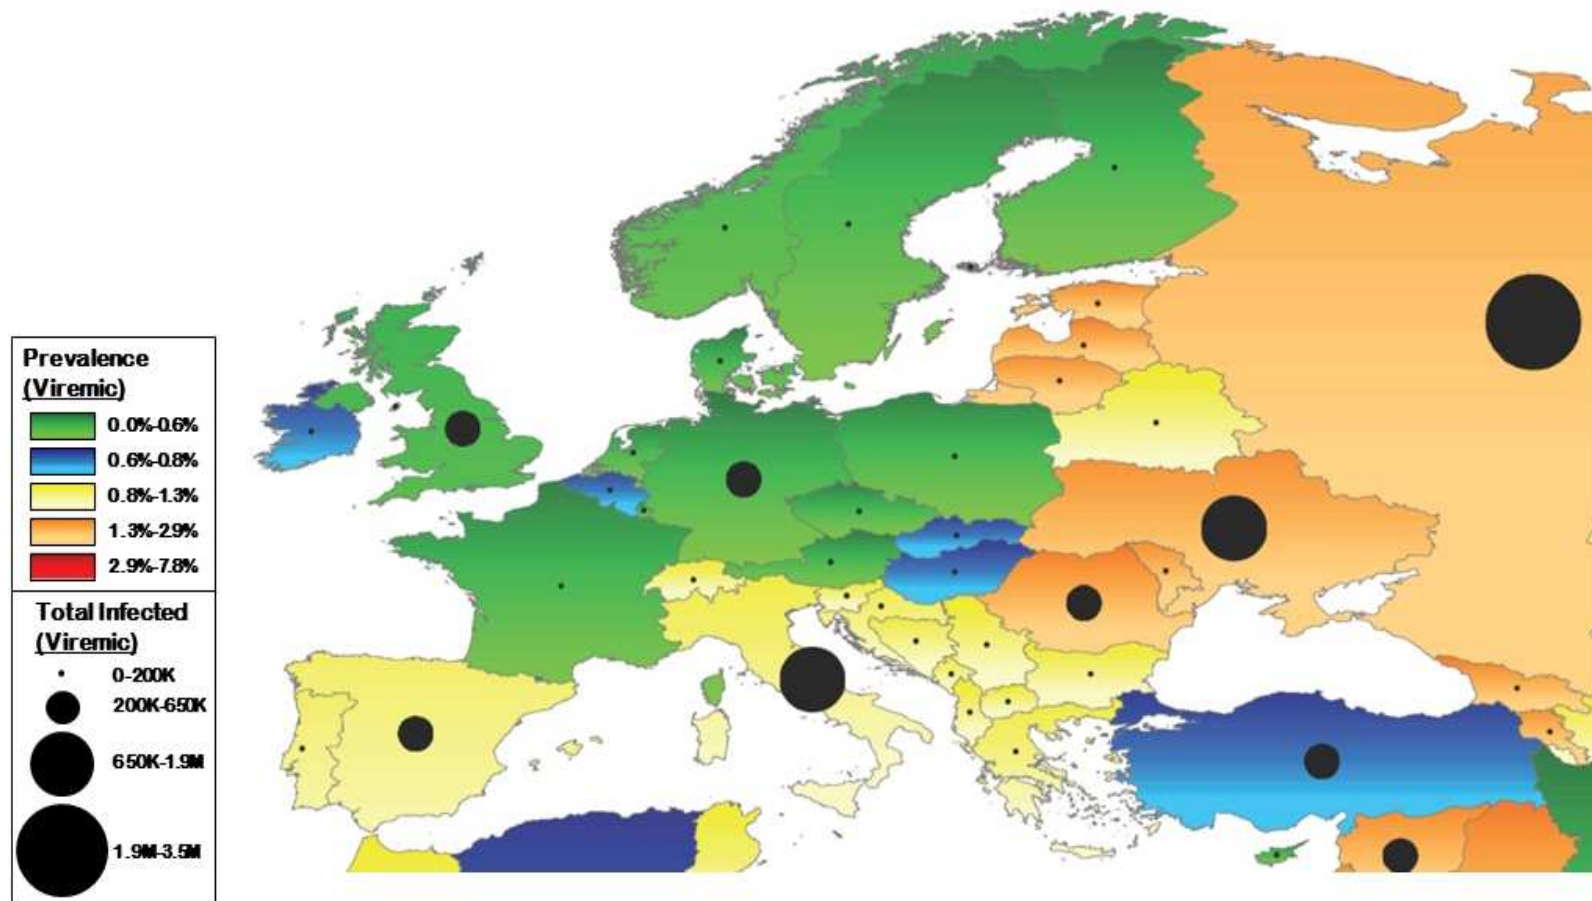

# Objectives

- The problem: epidemiology
- Why treat?
- Who to treat?
- Which drugs to use for which patients? (genotype, cirrhosis, ribavirin)
- How long to treat for?
- What about co-infection?
- Does resistance matter for HCV?
- What about acute HCV?
- What will this cost?

130–150 million people globally have chronic HCV infection, and  
350,000 to 500,000 people die each year

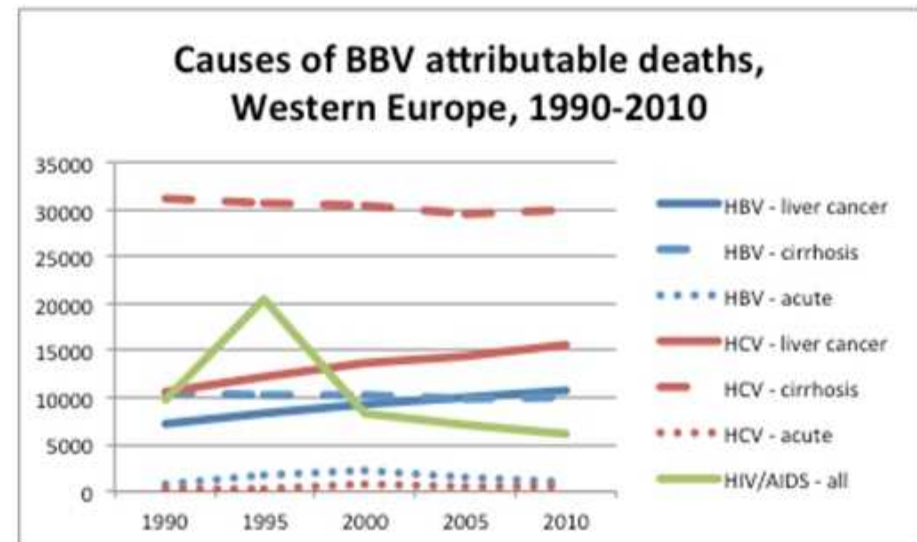

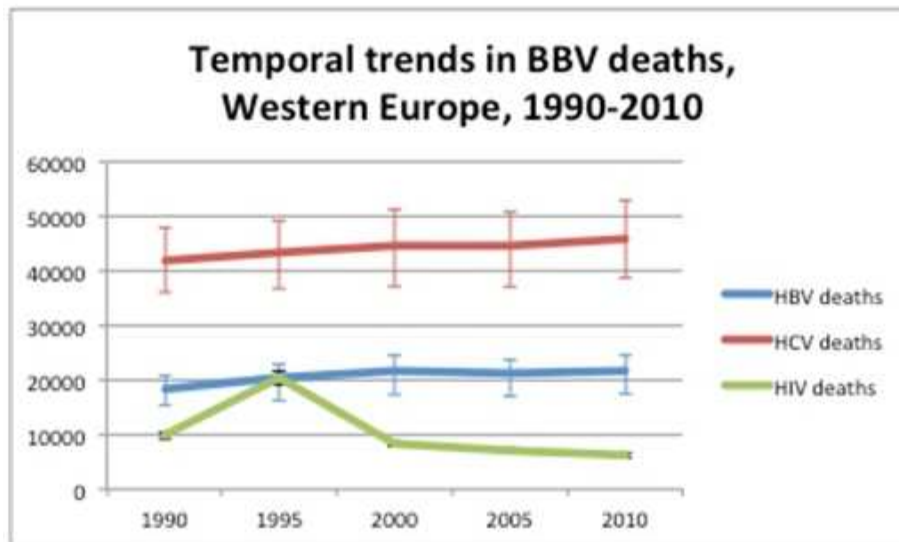

3.7 million RNA+ (viraemic) HCV infections in 2014  
in the EU , 13.3 million HCV Ab+ in all Europe

## Deaths attributable to HIV and Hepatitis in western Europe

- A relatively higher burden of HIV related mortality is observed to 1995, with subsequent decline from 2000 onwards
- HBV infection is a relatively lower contributor to mortality in Western Europe

# Objectives

- The problem: epidemiology
- Why treat?
- Who to treat?
- Which drugs to use for which patients? (genotype, cirrhosis, ribavirin )
- How long to treat for?
- What about co-infection?
- Does resistance matter for HCV?
- What about acute HCV?
- What will this cost?

# The goal: sustained virological response (SVR) to treatment

**Achievement of SVR following completion of treatment = cure**

SVR is associated with

- 70% reduction in Hepatocellular carcinoma
- 50% reduction in all-cause mortality

**Acute Infection**

**Chronic Infection**

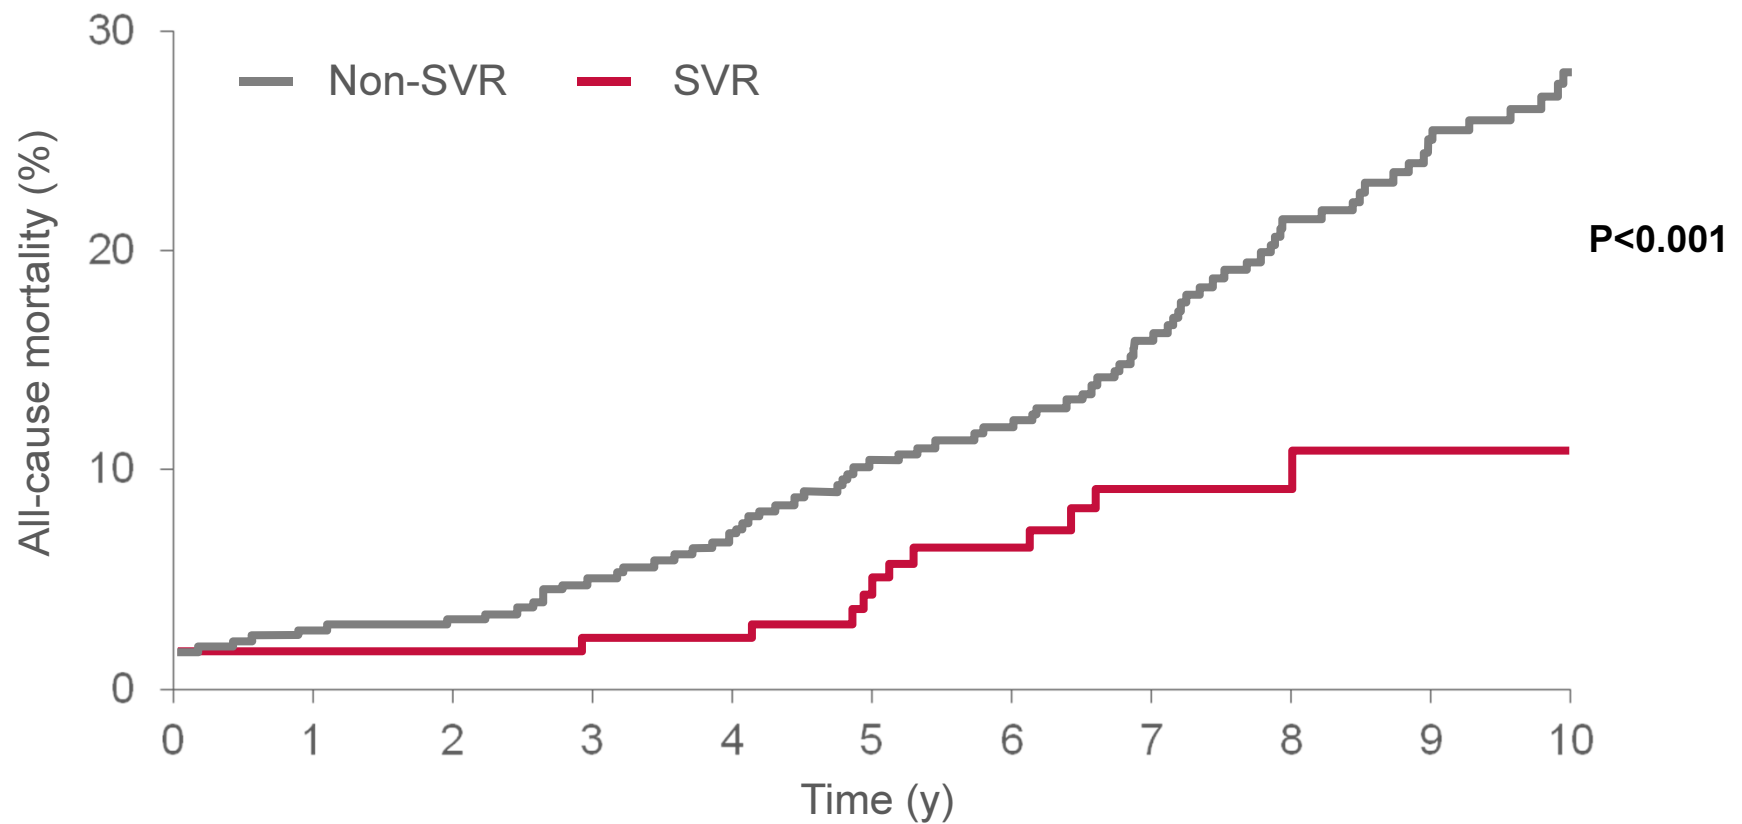

**Cure**

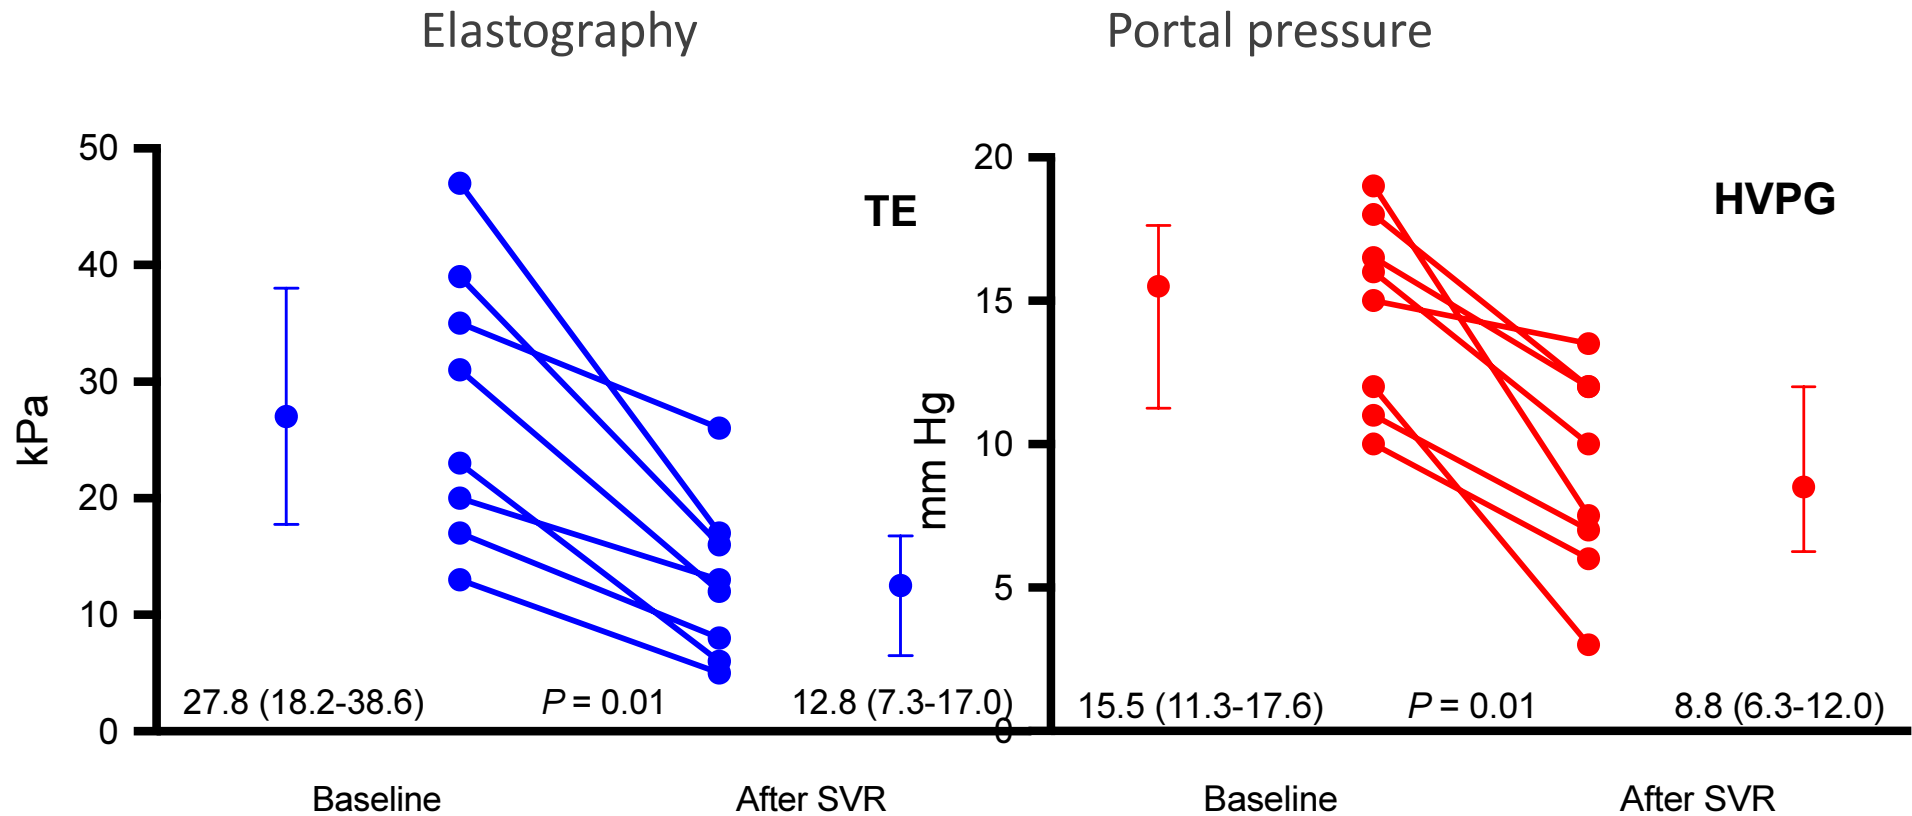

# SVR reduces all-cause mortality

Long-term follow-up 230 advanced fibrosis/cirrhosis patients treated with IFN-based regimen (1990–2003)

## Liver stiffness and portal pressure decreases with HCV SVR in HIV+

# SVR is associated with improved health-related quality of life

Patients with SVR had better physical & mental scores compared to baseline

# Non Hepatic complications of HCV

Renal disease (Chen 2014)

Cryoglobulinemia

Lymphoproliferative disease (Feld 2013)

Insulin resistance (Hsu YC, 2014)

Vascular disease (CAD & CVA) (Maria 2014)

Cognitive impairment

Skin disease including porphyria cutanea tarda

Bone Disease (Lo Re 2014)

## Recommendations for Testing, Managing, and Treating Hepatitis C

“Successful hepatitis C treatment results in sustained virologic response (SVR), which is tantamount to virologic cure, and, as such, is expected to benefit nearly all chronically infected persons.”

### *Goal of treatment*

The goal of treatment of HCV-infected persons is to reduce all-cause mortality and liver-related health adverse consequences, including end-stage liver disease and hepatocellular carcinoma, by the achievement of virologic cure as evidenced by an SVR.

**Rating:** Class I, Level A

### *Recommended regimens for HIV/HCV-coinfected individuals.*

HIV/HCV-coinfected persons should be treated and retreated the same as persons without HIV infection, after recognizing and managing interactions with antiretroviral medications (see Initial Treatment of HCV Infection and Retreatment of Persons in Whom Prior Therapy Has Failed sections).

**Rating:** Class I, Level B

# Objectives

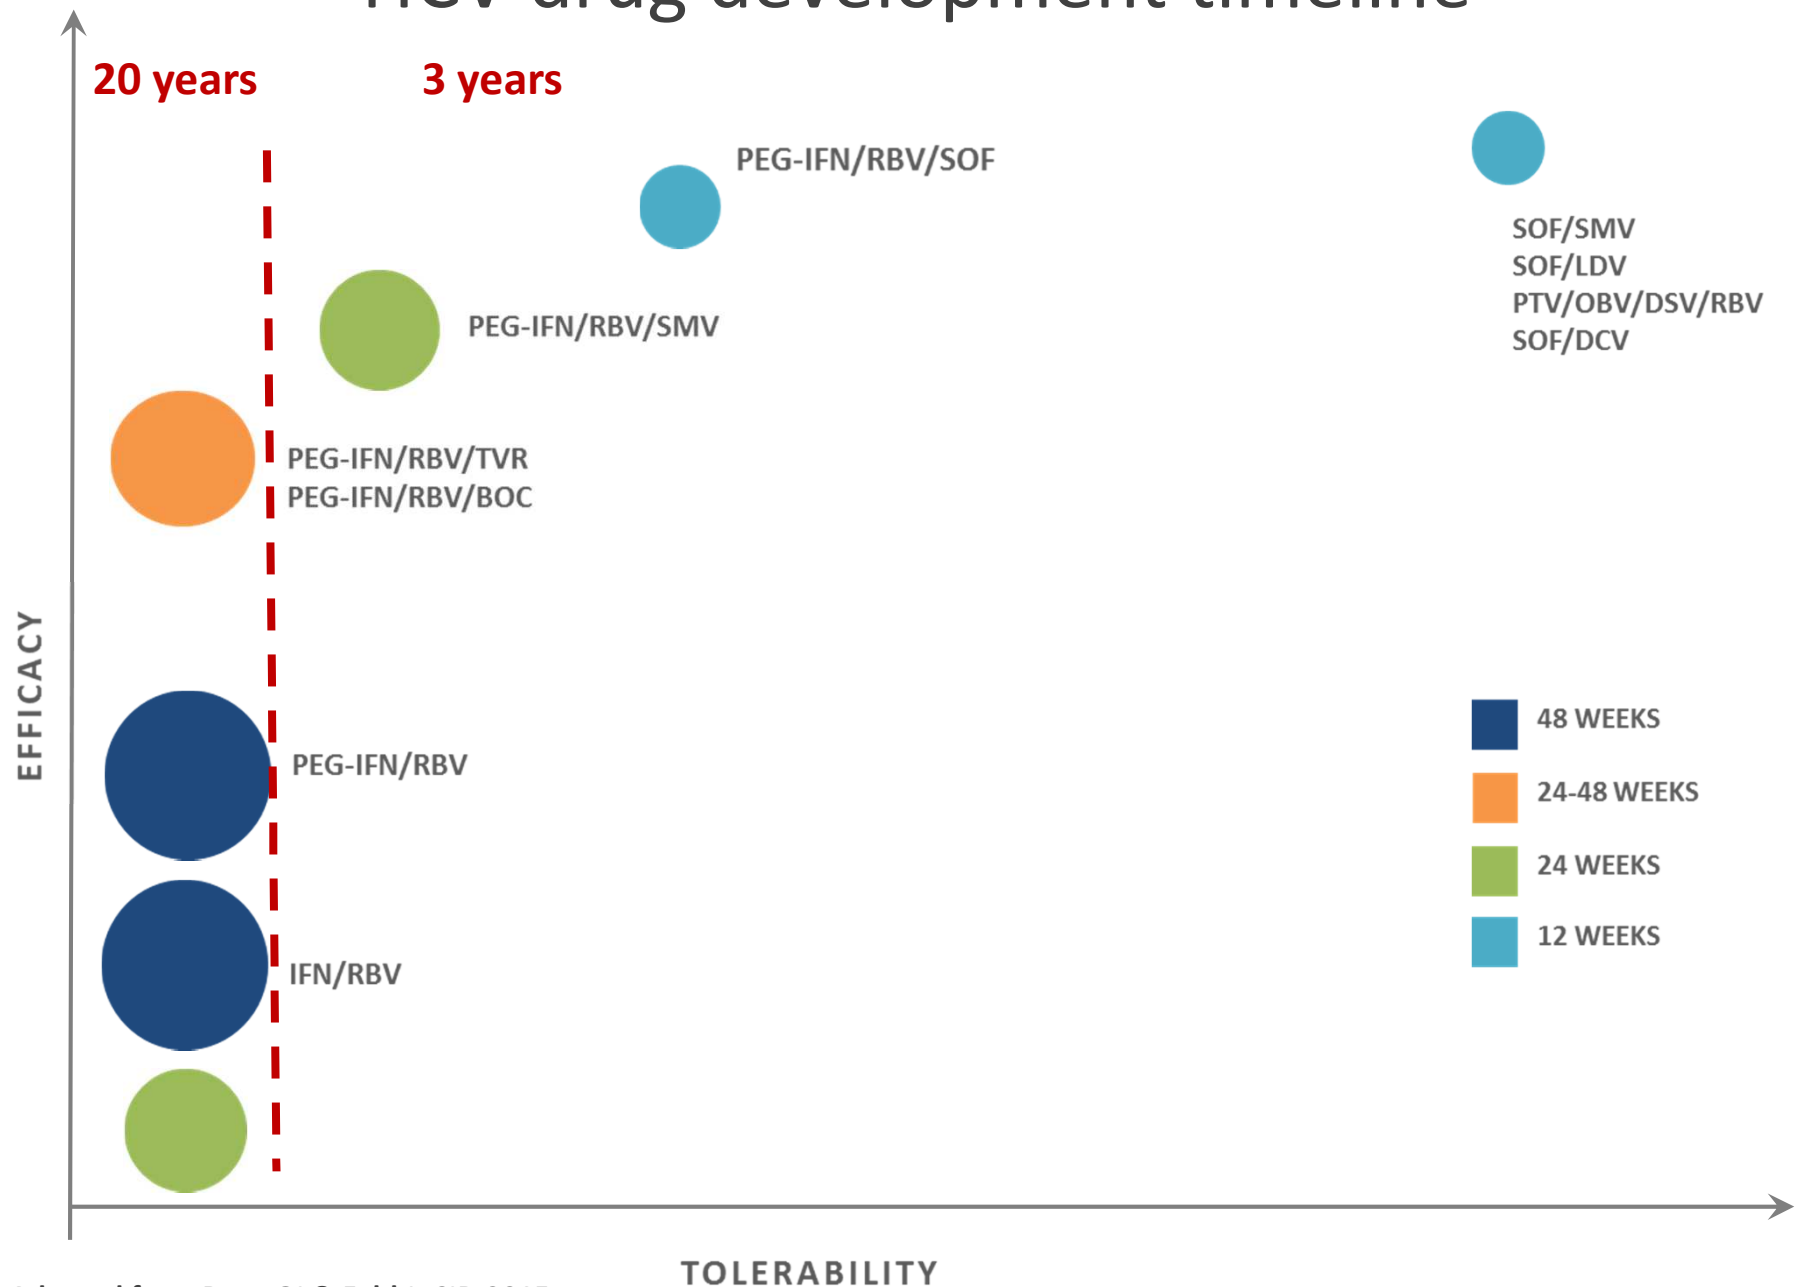

- The problem: epidemiology
- Why treat?
- Who to treat?
- Which drugs to use for which patients? (genotype, cirrhosis, ribavirin )
- How long to treat for?
- What about co-infection?
- Does resistance matter for HCV?
- What about acute HCV?
- What will this cost?

## Spectrum treated thus far with directly-acting agents (DAA's)?

- Treat patients in need across the extremes of the spectrum:
  - IFN-free for IFN-ineligible patients
  - Advanced cirrhosis and to prevent post-transplant recurrence
  - Mild disease Treatment
  - TASP

# HCV drug development timeline

Adapted from Dore GJ & Feld J. CID 2015

# HCV New Drugs= all oral DAA's

**Peg-IFN**

 **FREE FROM  
GUARANTEED**

**Ribavirin**

# GT (Genotype) differs in different parts of the world

>90% SVR12 across **treatment-naïve**  
GT 1, 2, 3, 4, 5, 6

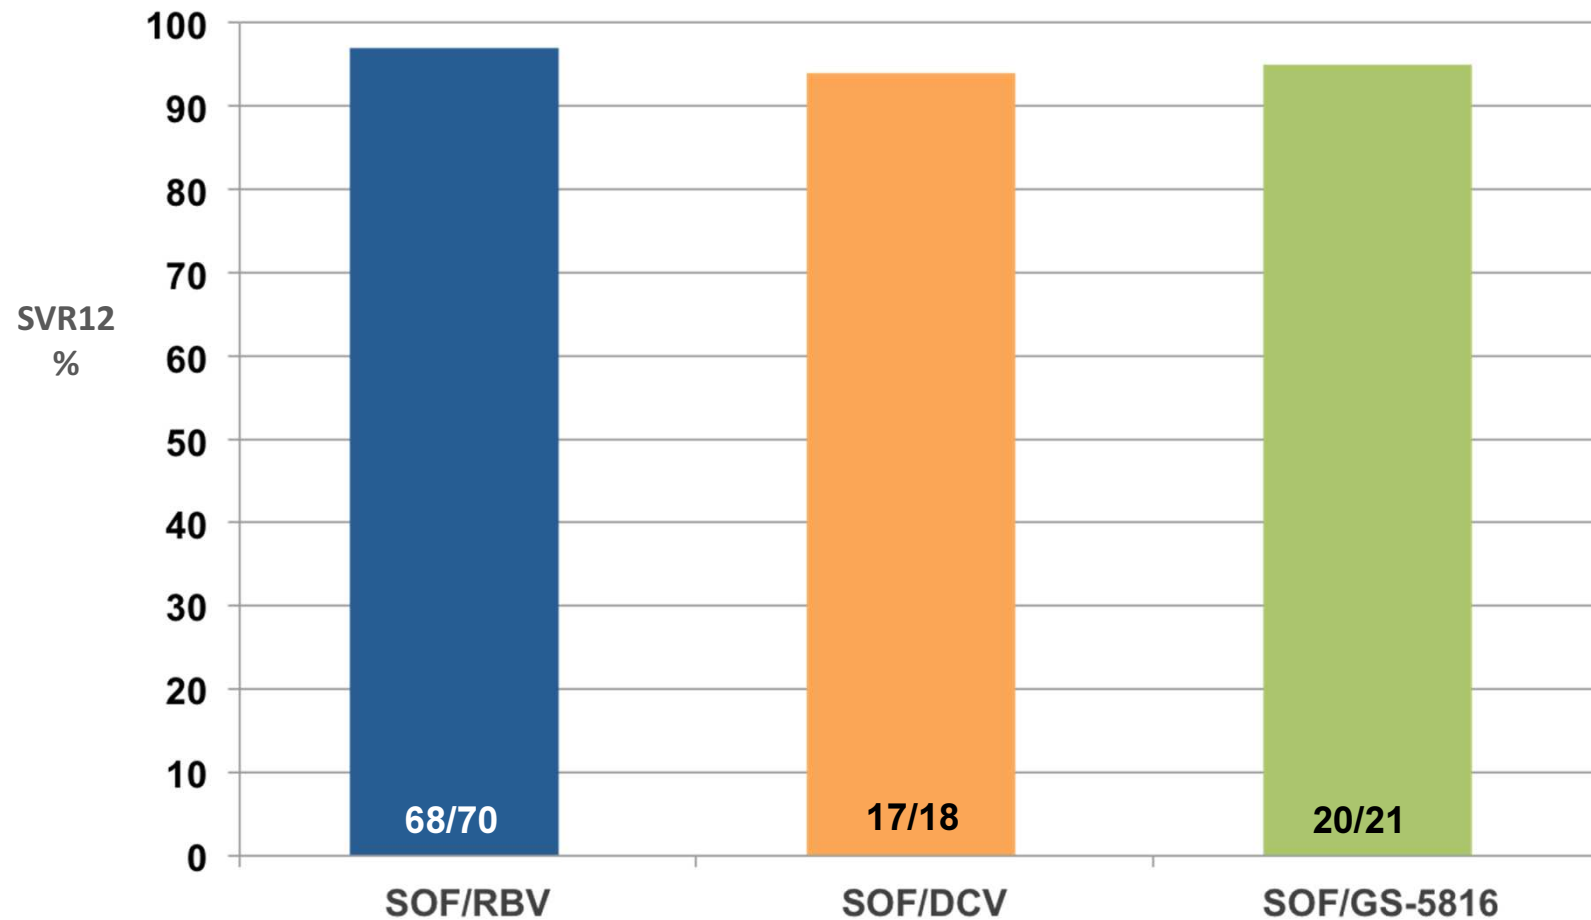

1. Lawitz E, et al. N Engl J Med 2013;368:1878–87;  
2. Zeuzem S, et al. AASLD 2013. Poster #1085.

## PEG-IFN-FREE DAA THERAPY: GT1 REGIMENS

# PEG-IFN-FREE DAA THERAPY: GT2 REGIMENS

Treatment naïve and experienced on 12 wks therapy

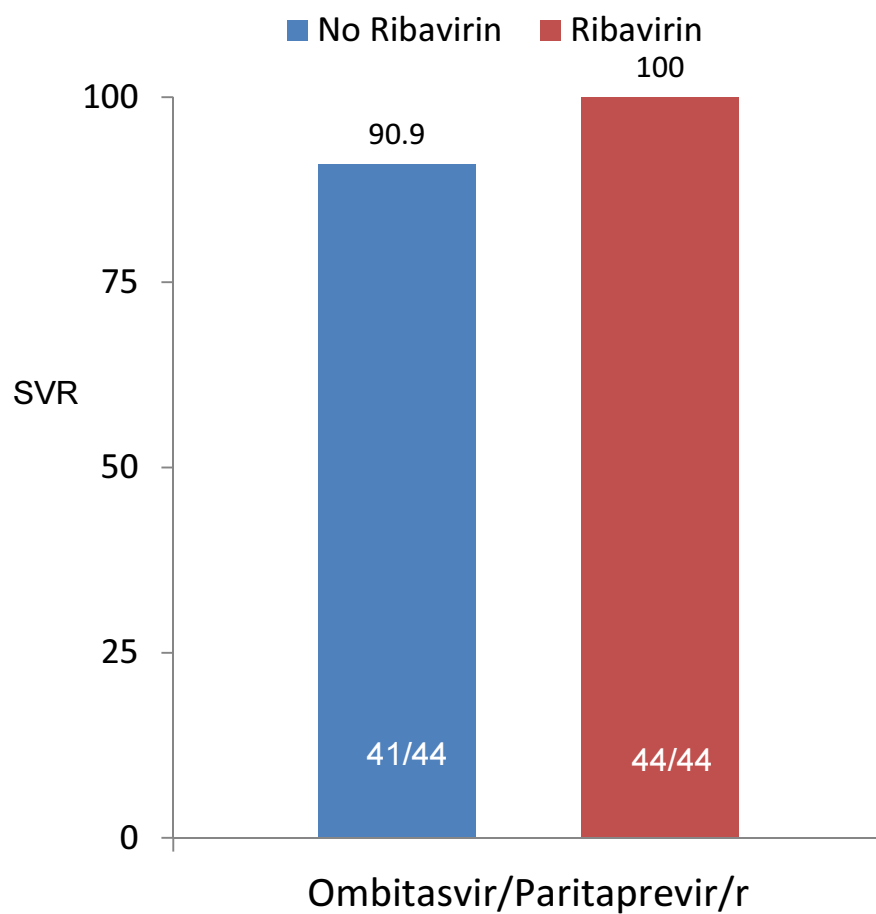

Lawitz E, et al. NEJM 2013; Everson G et al. ILC 2014; Wyles D et al. CROI 2015; Poordad F et al. ILC 2015

## PEG-IFN-FREE DAA THERAPY: GT3 REGIMENS

Treatment naïve and experienced , 12 wks treatment

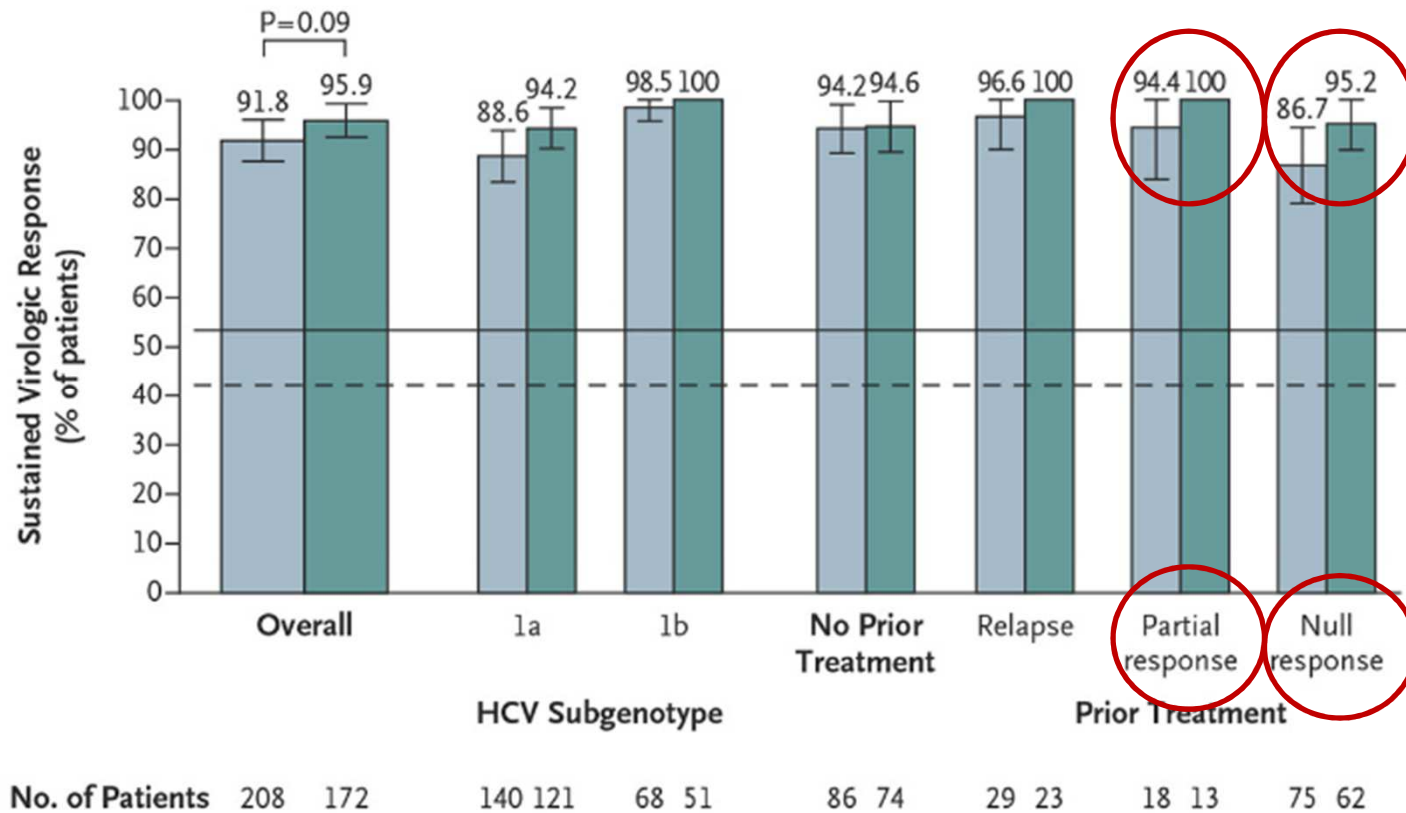

## PEG-IFN-free DAA therapy: GT4 regimens

# HCV cure may take longer in prior non-responders

Ombitasvir/Paritaprevir/r + Dasabuvir + Ribavirin

12-Wk group 24-Wk group

HCV relapse rate : 12 week group [12 of 203 patients, for a rate of 5.9% (95% CI, 2.7 to 9.2)] versus 24 week group [1 of 164 patients, for a rate of 0.6% (95% CI, 0 to 1.8)]

# Cirrhosis affects treatment outcomes eg HCV genotype 3 infection

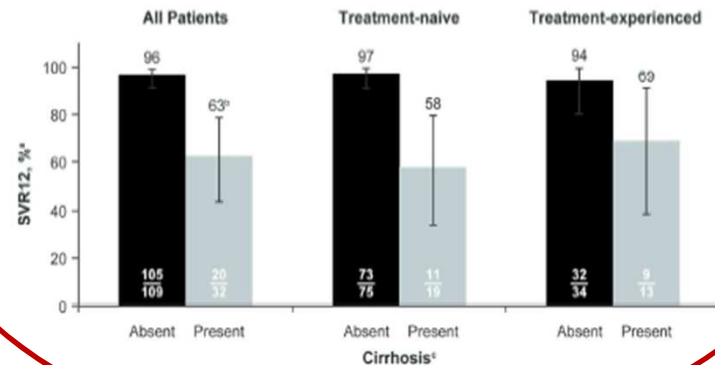

Sofosbuvir + Ribavirin for 24 weeks in persons with HCV genotype 2 or 3 infection

Daclatasvir + Sofosbuvir for 12 weeks in persons with HIV infection and HCV genotype 1, 2, 3, or 4 infection

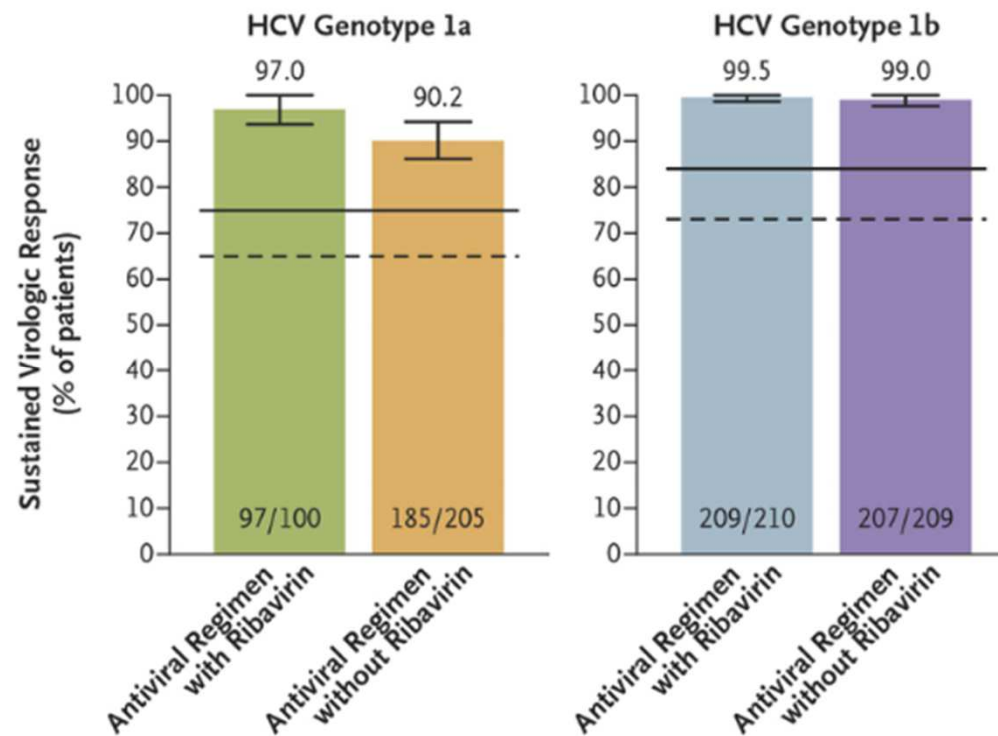

Daclatasvir + Sofosbuvir for 12 weeks in persons with HCV genotype 3 infection

Zeuzem NEJM 2014;  
Wyles CROI 2015  
Nelson Hepatology 2015

## Ribavirin can prevent treatment failure

Ombitasvir/Paritaprevir + Dasabuvir with or without Ribavirin

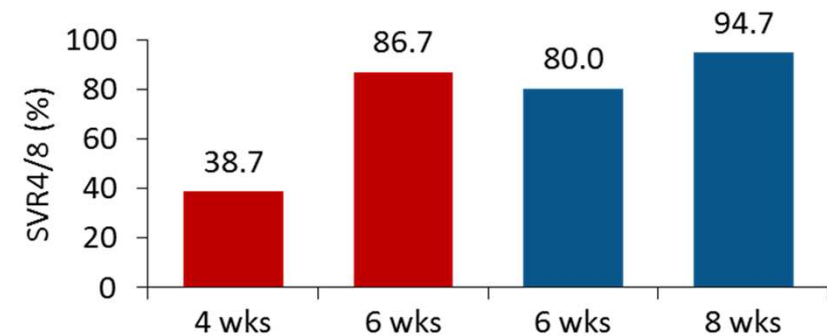

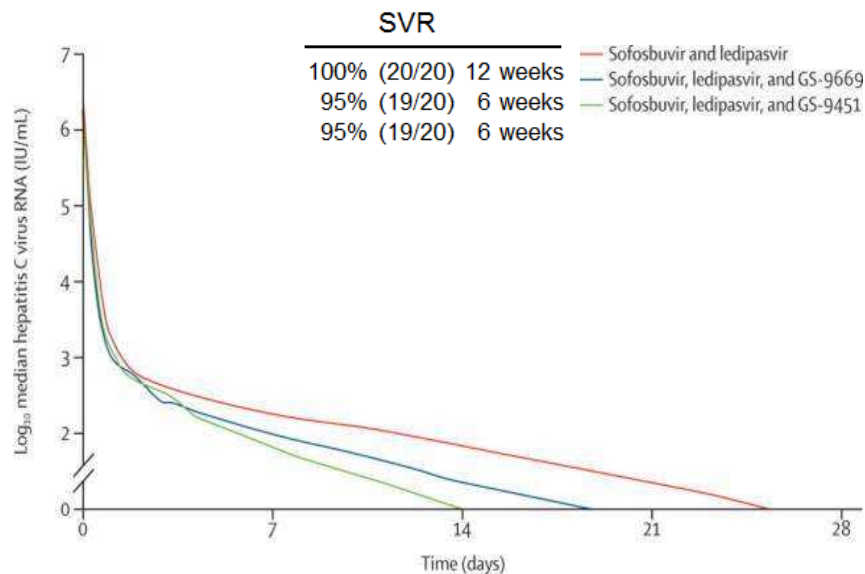

## Summary: the 'stress tests' for regime efficacy

- Stress test for HIV treatment regimen :
  - performance in patients VL> 100,000c/ml
- Stress test for HCV treatment regimen:
  - performance in the following areas is key:
    - Cirrhotic patients
    - Treatment Experienced vs Treatment Naïve
    - Genotypes especially G3 TE/cirrhotic

# Shorter duration treatment under investigation but 4/52 is inadequate

6 weeks of Sofosbuvir/Ledipasvir +  
GS-9669 or GS-9451 (nuc NS5B/NS5A + non-  
nuc NS5B or NS3)

4, 6 or 8 weeks of Grazoprevir/Elbasvir +  
Sofosbuvir persons with and without cirrhosis

Breakthrough	0	0	0	0
Relapse				
All relapse	19	4	4	1
Relapse at FU4	10	4	2	1
Relapse at FU8	9	0	2	0

# NHS-England Approved Treatment now...12 weeks

## Cirrhosis

SOF + LED + RBV\*  
OMB+PAR+DBV+RBV  
SMV+PIFN+RBV

GT1

SOF + RBV + PEG-IFN  
SOF+LED+RBV  
SOF+DAC+RBV

GT2

GT3

SOF + RBV

GT4

SOF + LED  
SMV+PIFN+/-RBV

EMA indication also allows for 24 weeks of therapy

# HCV TREATMENT STRIVING FOR PERFECTION

- Efficacy (>95%)in TE, TN, cirrhosis
- Well tolerated
- Once daily dosing
- Pangenotypic
- Short duration (6-8 weeks)
- Affordable**

# Objectives

- The problem: epidemiology
- Why treat?
- Who to treat?
- Which drugs to use for which patients? (genotype, cirrhosis, ribavirin )
- How long to treat for?
- **What about co-infection?**
- Does resistance matter for HCV?
- What about acute HCV?
- What will this cost?

## Effects of SVR on the risk of hepatocellular carcinoma and death

5-year risk of death (all-cause) by SVR

5-year risk of hepatocellular carcinoma by SVR

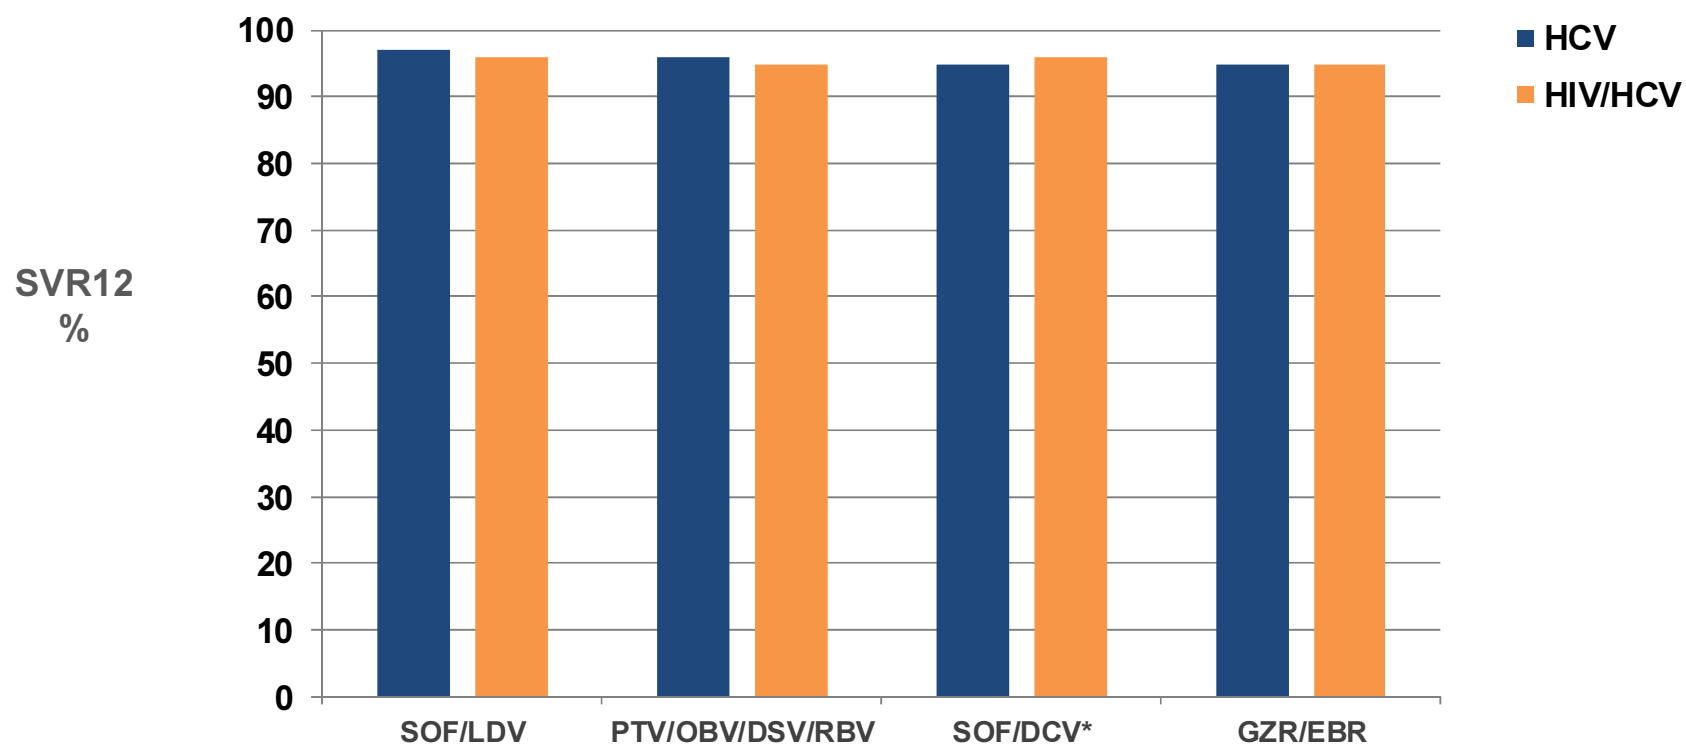

- Benefits may be offset by re-infection over 5 years
  - 0.9% in 'low-risk' persons
  - 8.2% in persons who inject drugs
  - 23.6% in persons coinfecting with HIV

## PEG-IFN-FREE TRIAL DATA: HCV VS HIV/HCV

GT1, treatment naïve, F0-4; 12 weeks duration

\*HCV mono in post-transplant

# 'Real world' HIV/HCV cohorts

# SOFOSBUVIR/SIMEPREVIR

OPTIMIST-1&2: GT1, F0-3/F4, TN/TE, 12 wks

# Ribavirin prevents the emergence of resistance associated variants

## HCV breakthrough with or without ribavirin during telaprevir/peginterferon

Zeuzem Hepatology 2012  
Hezode NEJM 2009

NS3 protease + non-nuc NS5B polymerase inhibitor +  
**No Ribavirin**

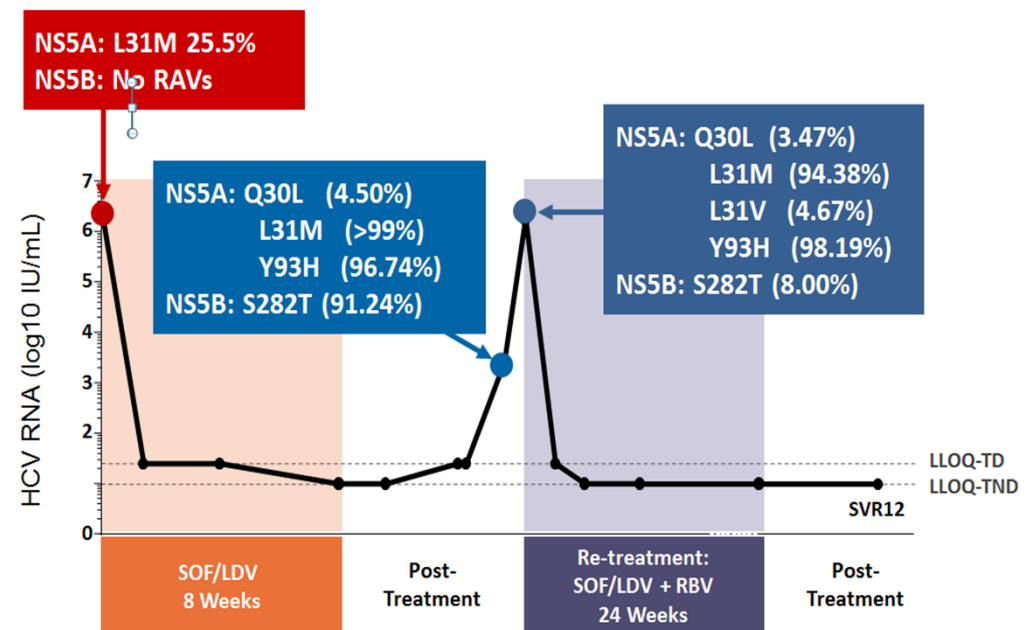

NS3 protease + non-nuc NS5B polymerase inhibitor +  
**Ribavirin**

# Impact of drug resistance in subsequent HCV treatment is uncertain

## Resistance associated variants can occur at the time of virologic failure

- Ledipasvir/Sofosbuvir (n=37)
  - NS5A RAVs, n=23 (62%)
  - NS5B RAVs,
- Ombitasvir/Paritaprevir/r + dasabuvir (n=64, 58 G1a)
- NS3 RAVs, n=55 (86%)
  - NS5A RAVs, n=47 (73%)
  - NS5B RAVs, n=40 of 57 (62%)
  - All three targets, n=30 of 58 (53%)

## Successful retreatment of relapser (8/52) SOF/LDV Retreated SOF/LDV +RBV for 24 weeks

# Objectives

- The problem: epidemiology
- Why treat?
- Who to treat?
- Which drugs to use for which patients? (genotype, cirrhosis, ribavirin )
- How long to treat for?
- What about co-infection?
- Does resistance matter for HCV?
- What about acute HCV?
- What will this cost?

## BHIVA guidelines for Acute Hepatitis C

- Discuss benefits of early vs deferred treatment
- Treatment if no spontaneous clearance:
  - <2log drop in HCV RNA after 4 weeks
  - Any positive RNA at 12 weeks
- Make sure start treatment before 24 weeks....
  - If > 24 weeks post diagnosis then =chronic
- Rx
  - Peg-IFN & weight-based Ribavirin following stopping rules:
    - If RVR then for 24 weeks
    - If no RVR then 48 weeks
    - If no EVR then stop.... (futile)

# TASP

## HCV TREATMENT AS PREVENTION EVALUATION POTENTIAL GOAL OF ERADICATION

### Potential Populations

- Community-based PWID
- Prisoners
- HIV+/HCV+ co-infected
- Antenatal
- Hospitalised

# Objectives

- The problem: epidemiology
- Why treat?
- Who to treat?
- Which drugs to use for which patients? (genotype, cirrhosis, ribavirin )
- How long to treat for?
- What about co-infection?
- Does resistance matter for HCV?
- What about acute HCV?
- What will this cost?

# Healthcare costs are climbing due to patients progressing to more advanced liver disease

The HCV population is ageing  
Serious liver disease associated with HCV will have a greater  
healthcare system impact as the infected population ages

# Cost-effectiveness of HCV treatment

- HCV treatment is cost effective
  - Less than \$50,000
  - Varies depending upon base assumptions (% in various stages, progression rate of fibrosis, reduction of QOL with HCV)
- Immediate treatment of moderate and advanced fibrosis appears to be cost-effective (>F1).
- Immediate treatment of patients with no fibrosis can be cost-effective, BUT at lower treatment costs
