# Therapeutic tendering: an innovative strategy to reduce the cost of antiretroviral therapy

Paul Benn, Nick LARBalestier, Stephan Worrell,  
Zheng Yin, Brian Gazzard, Margaret Johnson,  
Peter Sharott, Jess Peck, Claire Foreman

# Background

- NHS England is targeting efficiency savings of £15 billion by 2014/15
- £172 million spend on ART in London 2010/11
- The LSCG adopted a therapeutic tender approach for the procurement of ART to reduce the annual drug spend
- A multi-disciplinary panel of doctors, nurses, pharmacists, service users and commissioners oversaw the therapeutic tender, promoting the increased use of:
  - i) efavirenz (EFV)
  - ii) kivexa<sup>®</sup> in ART naïve
  - iii) atazanavir as the first boosted protease inhibitor (rATV)where clinically appropriate across 23 London HIV outpatient services

# Aims

We evaluated the impact of the therapeutic tender upon:

- Prescribing choice
- Clinical outcomes
- Patient experience
- Financial savings

# Methods

- All trusts submitted a monthly report to the LSCG including patient:
  - Demographics
  - ART regimens
  - Reasons for starting/switching ART and non use of a therapeutic tender regimen were collected
  - Clinical outcome data (CD4 and viral load) were obtained from national surveillance data (Public Health England)
  - Half of patients starting/switching ART completed a questionnaire regarding their experience. Undertaken in two phases

# Prescribing practice of therapeutic tender agents

# Prescribing practice of therapeutic tender agents

# Prescribing practice

2011/12 & Q1-3 2012/13

	Starting ART (%) n=3606 (12% London cohort)	Switching ART (%) n=4956 (16% London cohort)
Efavirenz	53.2	8.1
Kivexa <sup>®</sup>	22.4	13.1
Atazanavir/r	21.4	27.6

# Prescribing practice

2011/12 & Q1-3 2012/13

	Starting ART (%) n=3606 (12% London cohort)	Switching ART (%) n=4956 (16% London cohort)
Efavirenz	53.2	8.1
Kivexa <sup>®</sup>	22.4	13.1
Atazanavir/r	21.4	27.6

# Prescribing practice

2011/12 & Q1-3 2012/13

	Starting ART (%) n=3606 (12% London cohort)	Switching ART (%) n=4956 (16% London cohort)
Efavirenz	53.2	8.1
Kivexa <sup>®</sup>	22.4	13.1
Atazanavir/r	21.4	27.6

VL available at 3-6 months post starting ART in <50%

\* Median 127 days post starting ART (range 92-182)

# Median 131 days post starting ART (range 92-182)

# Outcomes - switching

	Atazanavir/r	Other
% viral load < 50 copies pre-switch	82	84
Median CD4 increase	11	4
% viral load <50 copies post switch	84	85
% viral load < 400 copies post switch	95	95

# Outcomes - switching

	Atazanavir/r	Other
% viral load < 50 copies pre-switch	82	84
Median CD4 increase	11	4
% viral load <50 copies post switch	84	85
% viral load < 400 copies post switch	95	95

# Proportion of patients who agree/strongly agree with statements (phase 1 - 2011/12)

0% 10% 20% 30% 40% 50% 60% 70% 80% 90% 100%

# Overall Savings

Drug	Cost saving £
Kivexa <sup>®</sup>	2,126,036
Atazanavir	2,065,132
Atripla <sup>®</sup>	923,667
Truvada <sup>®</sup>	714,288
Darunavir	1,256,383
Kaletra <sup>®</sup>	126,999
<b>Total</b>	<b>7,212,505</b>

# Limitations

- Cohort data
- Incomplete data
- Limited duration of clinical data available post starting/switching ART

# Conclusions

- Feasible
- Good uptake across services
- Clinical outcomes are as expected
- Patient experience positive
- Achieve significant financial savings
- Example of successful collaboration

# Acknowledgments

- Patients
- HIV leads/pharmacists/clinical staff
- LSCG:           Stephan Worrell  
                      Claire Foreman  
                      Jess Peck  
                      Peter Sharott
- HPA:             Zheng Yin  
                      Alison Brown  
                      Graeme Rooney

# Outcomes

- Overall 94% matched with SOPHID 2012 part 1
- CD4 available before and after start/switch: 89%
- Viral load available before and after start/switch: 80%
- Less than half had CD4 or viral loads available >3/12 after start/switch

# Subsequent switchers

(Q1-3 2012/13)

- Total of 4196 start/switch episodes among 3793 individuals
- 274/3793 (7.2%) subsequently switching  $\geq$  once (range 1-6)
- 32/550 (5.8%) subsequently switch away from kivexa
- 102/984 (10.4%) subsequently switch away from efavirenz
- 86/622 (13.8%) subsequently switch away from atazanavir/r

The logo of the British HIV Association (BHIVA) is a circular emblem with a complex, geometric design. It features a central circle surrounded by concentric rings of smaller circles and lines, creating a sunburst or molecular-like appearance. The logo is positioned behind the main title text.
