

## Registrar Clinico-Pathological Correlation Case Presentation Session Entries

A cherished tradition of the conference is a session of Clinico-Pathological Case presentations by registrars. This is a popular session and provides a forum for registrars to present in front of the UK HIV medicine community. BHIVA awards a certificate for the winning presentation. The session will be co-chaired and judged by Professor Mark Bower, Consultant HIV physician at Chelsea and Westminster Hospital NHS Foundation Trust and Dr Ula Mahadeva, consultant histopathologist at Guy's & St Thomas' NHS Foundation Trust.

Three cases will be selected for presentation at the conference. Please read these guidelines before submitting an entry:

### Format

- All entries should be in Microsoft Office PowerPoint format, with slides in a 16:9 ratio.
- The presentation should take no more than 10 minutes to deliver orally, allowing a further 5 minutes for questions and interchange.
- The presentations should be interactive, and an audience voting facility will be provided. You should include a minimum of 3 question slides within your presentation, on which the audience can vote on suggested answers. The maximum number of potential answers allowed per question is 5.
- You should include a slide with learning points.

### Timelines

- Entries must be submitted by email by **Sunday 15th January 2023**
- The entries selected for presentation will be chosen by the co-chairs and both successful and unsuccessful entrants notified on **Friday 10th February 2023**
- The co-chairs will provide suggestions for improvement of the selected presentations on **Friday 20th February 2023**
- The finalised presentations should be emailed to [conferences@bhiva.org](mailto:conferences@bhiva.org) no later than two working days prior to the event date

### Criteria for selection of entries

The entries will be anonymised before being viewed by the co-chairs.

- The aim of these presentations is to discuss the role of histo/cytopathology in the management of HIV disease and learning about HIV disease. The presentation should be based on a patient's case (or a couple of patients' cases) of which the entrant has good knowledge. There must be some histopathology and/ or cytopathology sample(s) from the patient. Cases with autopsies, particularly if autopsy histology is available, are likely to be looked upon favourably.
- Images must be included of the patient's relevant imaging investigations and histology/ cytology/ autopsy pathology. If these are not yet available at the time of initial submission of the entry, a slide entitled with the image can be left blank, to indicate that the image is being obtained.

- For each session the entries selected will aim to reflect a range of pathologies, in order to make for a varied discussion, e.g. if there are two TB cases only one is likely to be selected.

**From selection to presentation**

The co-chairs will provide feedback to the selected entrants, so that their presentations can be optimised prior to presentation at this national forum.

**If your entry is not selected**

The standard of entries is generally high and do not be disappointed if yours is not selected: it may just be a reflection of the region/ case mix of the other entries received at that round, and not an indication that your entry was lacking worth. So please do consider re-submitting the same or another entry for the next round. There are usually less entries for the autumn
